Premium Scanner Driver Install Software and Instructions Windows 8

Helpful Hint

Disconnect the scanner before proceeding

Follow these steps only after you have installed the CFA Upload Manager Program and completed step #7 of the software installation instructions and your scanner is still not recognized by the CFA Upload Manager Program.

Step 7 reads - Drag and drop BOTH programs to your desktop; a very important step.
If missed, the software program WILL NOT recognize the scanner.

1. Access the zipped folder that contains the installation setup application from this link <http://www.trcrent.com/LeadDownload.asp> (copy and paste in a new URL browser)
2. Enter the Username: KDCDRIVR and Password: password (these login credentials are case sensitive).
3. Drag and drop both the Setup.exe and KDC_Driver.msi install application package to your desktop to unzip the files.
4. Once the programs are on your desktop, click the Setup icon.
5. If you already have the driver installed, you will be prompted to repair or remove. Select Remove, Finish then Close.
6. A success message will display - KDC_Driver has been removed successfully. Click Ok.
7. Click on the Setup icon again to install the KDC_Driver and follow the onscreen instructions.
8. The Installation Complete message will display. Click Close to exit. Wait a few seconds and you will receive the message - KDC driver has been installed successfully. Click OK
9. Connect your scanner first and then open the CFA Upload Manager Program.
10. A small window appears with a small GRAY button "Upload Student Records". This button will turn blue when the scanner is connected.
11. The Upload Manager should indicate the scanner is connected.

If you are still unable to connect to the CFA Upload Manager Program,
please call 888-601-0200 for technical support.
